# USERGUIDE

At this time, our group has just completed some main parts of Wilson such as homepage, products and contacts. The content and design of the website currently are not the final official version, so they may not have the most beautiful appearance.

## 1. Home Page:

There elements will always be on top of all pages of the website; from here users can easily jump into any categories at any time or return to the homepage by clicking on the name of the elements in the menu which they are interested in

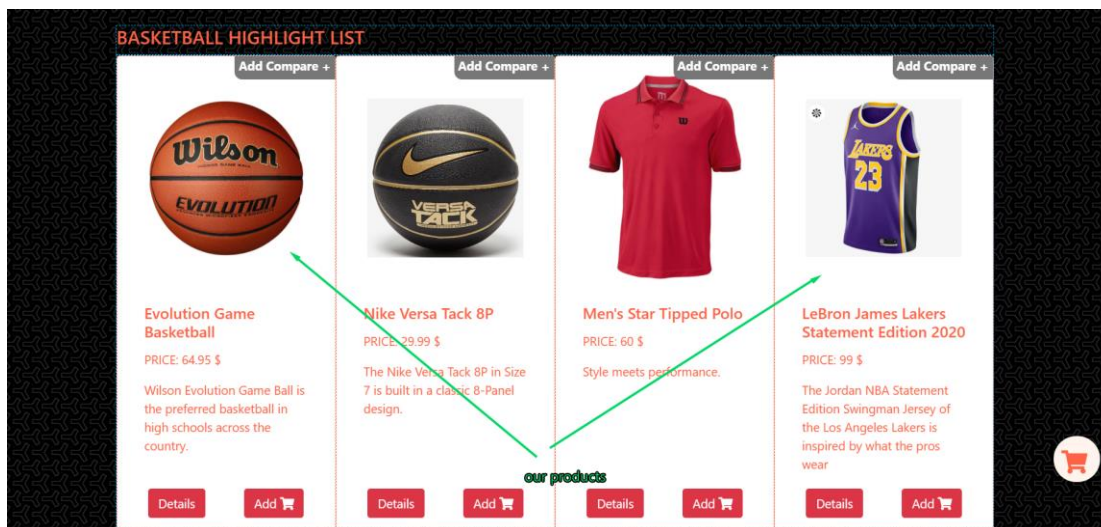

After that, we show brief advertising of product such as: advertising carousel which can auto changes slides and advertising banner.

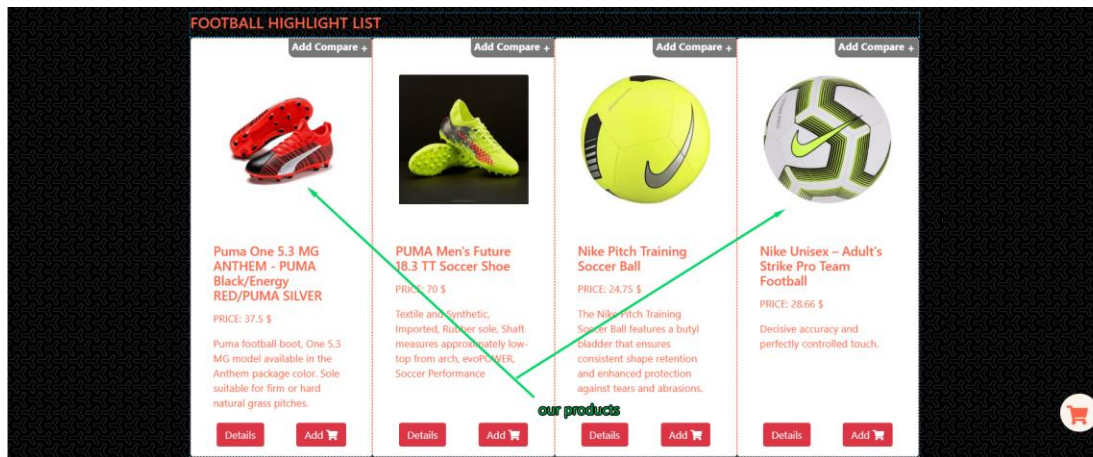

Main of Homepage: we show a table of our highlight products:
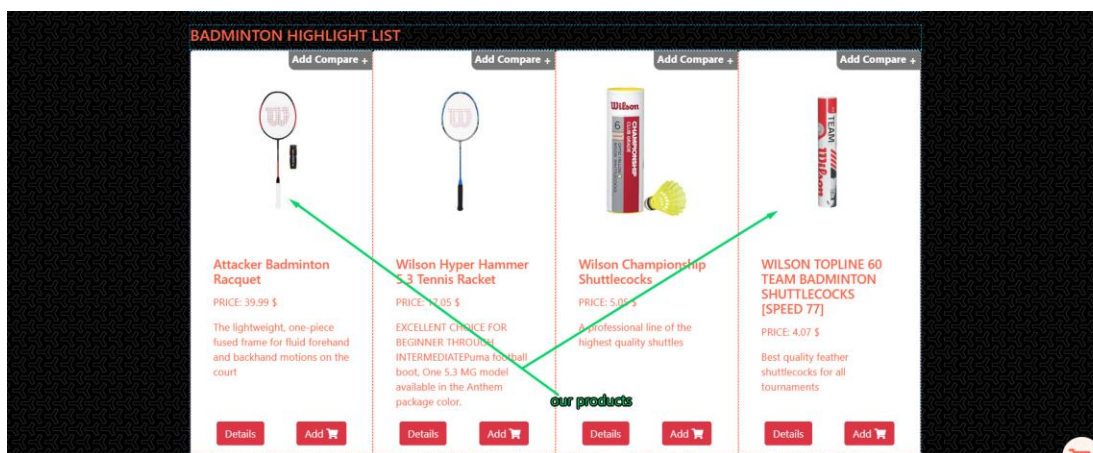

+ Basketball products

+ Football products

+Badminton products

Final the footer which have stander of Wilson Sporting Goods include in: phone, email, time and exact location.
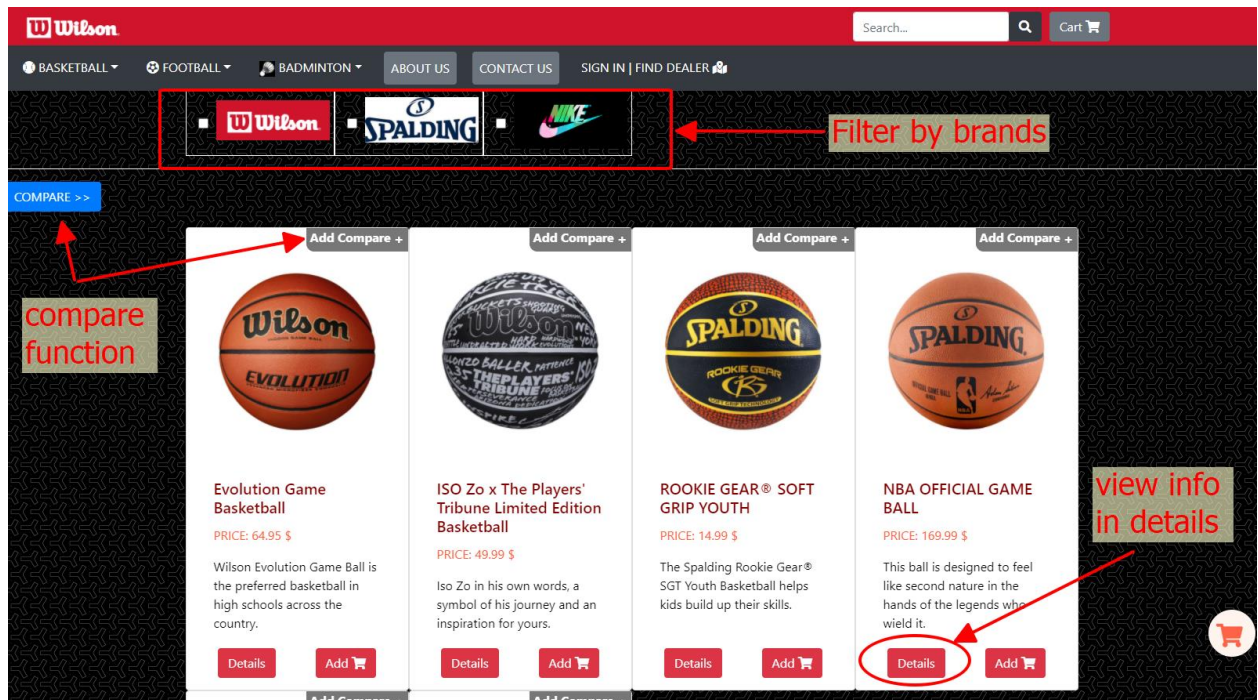

**2. Product Page:**

After navigate to the specific product type, this page shows relevant brand name and their products along with brief information as layout below:

Default display shows all product of the type of all relevant brand name.

This page contains 04 main functions:

1- Show list of brand names and products with brief information via cards

2- Show details information each product by clicking on "Details button" in the card.

3- Filter products by brand name

4- Compare products of the same type of different brand name as well as same brand name.

## 1- Show list of brand names and products with brief information via cards

- The relevant brand name is a list of check box created via JS code by select from JSON data with condition is product type.
- The relevant products are a list of cards created via JS code by select from JSON data with conditions are product type, brands, …

## 2- Show details information each product by clicking on "Details button" in the card.

Details of product can be shown by click on the Details button of each card.

The JS script listen click event on the button and retrieve information in the card and load on to the overlay which cover full viewport. A nav pill tabbed navigate details to aside tab view.

An overlay will appear. As below photo:

## 3- Filter products by brand name

Then user can filter products by brand name here by choosing the brand name check boxes.

Each product card is marked by its own brand in class attribute, a JS script listen click event on check boxes, all checked brand will call their marked cards show respectively while the unchecked ones hide their cards.

User guild as photo below:
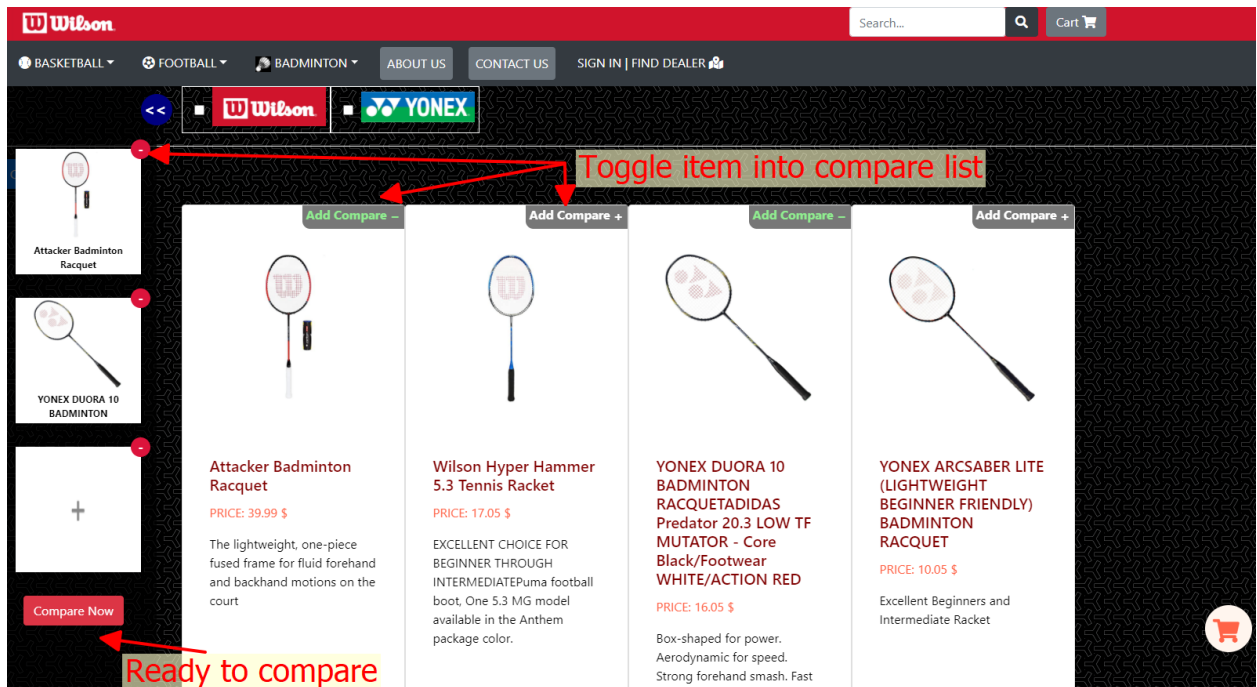

user can filter product by brand name

### 4- Compare products of the same type of different brand name as well as same brand name.

While browsing goods, user can pick them in comparison to have an overview of their different specifications.

By clicking on "Add Compare" tag on the right-top corner of the card, the item will be toggle into compare list.

Then a panel slide from the left contain compared items. When user chose at least 02 items, "Compare Now" button will be ready to take an action.

When user take comparison an overlay will display a table in which show comparison information to user.

### 3. Contact Us:

There should be a "Contact Us" page that includes the Address of the Wilson store. Company addresses must be displayed using the GeoLocation API (eg GoogleMaps).

The page information includes the get in touch and contact form:

- Get in touch: The address of the Wilson store.
- Contact form: Section for customers to fill in personal information if you want to ask questions.

Note:

- If the customer entered is not valid, the page will be displayed:
